SA-AR-03 Application Architect, Senior

Duties

Responsible for analyzing assigned specifications, planning, designing, developing and testing solutions utilizing appropriate web browser-based Internet/Intranet/Extranet technologies. Provides appropriate documentation for service-oriented objects design, assumptions, and performance metrics. Responsible for developing an integrated solution taking legacy applications and processes into account. Designs integrated solutions leveraging existing standards and legacy infrastructure. Provides definition of current architecture blueprints. Provides software development lifecycle experience in web application technologies, service oriented and middleware solutions. Researches new technologies and products for their applicability to business processes. Must be able to compare various solutions and determine the most suitable. Ensures that development efforts are well planned and in agreement with standards.

Education

Bachelor's Degree from an accredited college or university in Engineering, Computer Science, Mathematics or other related scientific or technical discipline. Master's degree preferred.

General Experience

At least ten (10) years of experience planning, designing, building, testing, and implementing IT application systems. Must have led or been chief architect in a major IT applications implementation effort. Must have a strong background in software engineering principles and techniques.

Specialized Experience

At least six (6) years of experience in designing and testing medium to large-scale sites and management of at least five Internet projects.
